

Small Cap Quality Value Portfolio

Third Quarter 2017

Portfolio Review

The Small Cap Quality Value portfolio outperformed the Russell 2000 Value Index during the third quarter. The outperformance was primarily driven by strong stock selection in the consumer staples and producer durables sectors. Performance was hurt by negative stock selection in the health care and consumer discretionary sectors.

Positions that contributed most positively to performance during the quarter were National Beverage and RBC Bearings. Strong sales of National Beverage's La Croix brand fueled another strong quarter, resulting in the company reporting strong consolidated revenue growth and EPS growth in the most recent quarter. We believe LaCroix has additional opportunities to grow, and the launch of a new Shasta branded line of flavored sparkling water may add an additional leg of growth. At the same time, the company will continue to return capital to shareholders via special dividends. RBC Bearings' stock outperformed as the company benefited from an influx of commercial aircraft deliveries, a rebound in industrial end-markets and an improving margin profile. We remain optimistic about RBC's competitive position in aerospace and defense, and the long-term outlook for the business.

Positions that detracted the most from performance during the quarter were Patterson Companies and Cheesecake Factory. Patterson Companies' shares exhibited weakness in the quarter after reporting lackluster financials as the winding down of the distribution deal with DENTSPLY adds to the company's uncertainty going forward. We believe the distribution noise should calm down over the next few quarters and new deals signed with Align, Danaher and 3Shape should offset some of this weakness. The company is also in the midst of a search for a new CEO. Cheesecake Factory reported somewhat weaker-than-expected results last quarter. There is some weakness occurring at lunch time and we remain concerned that some of the challenges in mall traffic are impacting the company. We met with management and were impressed with the operating improvements of the company, as well as incremental opportunities to drive top-line growth. The international opportunity remains sizeable and the Cheesecake Factory has been very discerning in choosing partners. We expect near-term trends to remain choppy but expect the company to focus on execution in a competitive market.

Purchases and Sales

In the Small Cap Quality Value portfolio, we bought positions in Manhattan Associates and MGM Growth Properties, and we sold our positions in Cabot Microelectronics and Sun Hydraulics.

Manhattan Associates is a vertical software provider, focused on complex supply chain and omni-channel solutions. The company helps customers reduce inventory, optimize warehouse operations and drive other supply chain efficiencies.

MGM Growth Properties operates as a real estate investment trust (REIT), which engages in the acquisition, ownership and leasing of destination entertainment and leisure resorts. MGM Growth Properties was formed by MGM Resorts International to acquire and hold 11 of the casino properties that MGM operates. We sold Cabot Microelectronics to buy MGM Growth Properties.

We sold Sun Hydraulics as the company's new CEO has quickly changed the strategy of the company from a steadily growing company to one today that has publicly stated to wanting 15% to 20% top-line growth with the bulk coming from acquisitions. He has also changed the balance sheet of the company from cash to debt in a very short period of time. With a recovery in the stock price, we sold our shares as this is no longer the same quality business that we initially purchased.

Outlook

On balance, the outlook for equities continues to be favorable. Any meaningful uptick in inflation caused by either higher energy prices or significant wage growth is the principal risk in the outlook for the stock market. We will continue to monitor inflationary trends closely over the next couple of years. Geopolitical events, such as hurricanes and tensions with North Korea, have taken a back seat to the improving global earnings outlook so far this year. With the stock market at all-time highs, we believe it is important for clients to focus more than ever on their longer-term goals and risk tolerance, as market corrections can and do occur frequently—even in bull markets. With such unpredictability, we recommend that clients do not try to time the market, as most often investors fail severely in this endeavor and hurt their returns.

Small Cap Quality Value Portfolio

Third Quarter 2017

Disclosure

Kayne Anderson Rudnick Investment Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. Kayne Anderson Rudnick Investment Management, LLC has been independently verified for the period from January 1, 1999 through December 31, 2015.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Small Cap Quality Value Composite has been examined for the period from January 1, 1999 through December 31, 2015. The verification and performance examination reports are available upon request.

Kayne Anderson Rudnick Investment Management, LLC, a wholly owned subsidiary of Virtus Investment Partners, Inc., is a registered investment advisor under the Investment Advisers Act of 1940. Registration of an Investment Advisor does not imply any level of skill or training. Kayne Anderson Rudnick Investment Management, LLC manages a variety of equity and fixed-income strategies focusing exclusively on securities the firm defines as high quality.

The composite includes all fully discretionary institutional and pooled Small Cap Quality Value Portfolios. Small Cap Quality Value Portfolios are invested in equity securities with capitalizations consistent with the Russell 2000® Value Index, that have market control, rising free cash flow,

shareholder-oriented management, strong consistent profit growth and low-debt balance sheets. For comparison purposes, the composite is measured against the Russell 2000® Value Index. The Russell 2000® Value Index is a market capitalization-weighted index of value-oriented stocks of the 2,000 smallest companies in the Russell Universe, which comprises the 3,000 largest U.S. companies. The index is calculated on a total-return basis with dividends reinvested. Benchmark returns are not covered by the report of independent verifiers. The composite was created in June 1998. Previously, only institutional accounts were included. A list of composite descriptions and policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request.

Prior to January 1, 2011, the composite minimum was \$250,000. As of January 1, 2011, the composite was redefined to include both institutional and mutual fund [or pooled] accounts. Prior to January 1, 2011, accounts that experienced a significant cash flow, defined as aggregate flows that exceeded 25% of the account's beginning of period market value, were temporarily removed from the composite.

The standard management fee schedule currently in effect is as follows: 1.00% for the first \$25 million; 0.80% on the next \$25 million; 0.70% on the balance. Actual management fees charged may vary depending on applicable fee schedules and portfolio size, among other things. Additional information may be found in Part 2A of Form ADV, which is available on request. The performance information is supplied for reference. Past performance is no guarantee of future results.

Results will vary among accounts. The U.S. dollar is the currency used to express performance. Returns are presented net of transaction fees and include the reinvestment of all income. Gross returns will be reduced by investment management fees and other expenses that may be incurred in the management of the account. Model net returns have been calculated by deducting 1/12th of the highest tier of the standard management fee schedule in effect for the respective period from the gross composite returns on a monthly basis.

Internal dispersion is calculated using the asset-weighted standard deviation of annual gross returns for accounts in the composite for the entire year. For those years when less than five accounts were included for the full year, no dispersion measure is presented. The three-year annualized ex-post standard deviation measures the variability of the composite (using gross returns) and the benchmark for the 36-month period ended at the following dates:

3-Yr Annualized Standard Deviation (%)

	December 31	Composite	Benchmark
2011		21.64	26.42
2012		16.24	20.17
2013		14.50	16.05
2014		13.06	12.98
2015		13.94	13.65
2016		14.30	15.72

Year	Total Firm Assets (\$ millions)	Total Composite Assets (\$ millions)	Accounts at Year End	Gross Annual Return (%)	Net Annual Return (%)	Russell 2000® Value Index Annual Return (%)	Internal Dispersion
2007	5,392	107	62	2.19	1.18	(9.78)	0.56
